**This month’s presentation will be on:**

“Lateral Load Path Basics” outlines the path a wind load takes through a wood-frame structure, as well as the importance of a complete load path and associated construction details. This session will cover understanding the complete lateral load path, Identify common framing errors within this path, understand the consequences of an incomplete path, and discuss and evaluate code requirements for critical details.

*And*

“Frame for Success” will identify the most common wood construction framing and sheathing errors found in today’s construction market. This session will examine the consequences of these common errors and provide practical solutions for avoiding them.

These topics will be Presented by Robert A. Kuserk, PE from the APA Engineered wood Association

**TRIVIA: How many Ghosts show up in the Movie “A Christmas Carol?”**
